

TO WHOM IT MAY CONCERN

Regarding Avian Influenza:

- Avian 'Flu is naturally occurring in wild birds.
- Very often these birds are carriers and not affected by the Avian 'Flu.
- Avian 'Flu is transmitted via saliva, nasal secretions and faeces.
- Avian 'Flu is neither air-borne nor food-borne and can only be transmitted to humans through direct contact with an infected bird's saliva, nasal secretion or faeces.
- However, in most instances of Avian 'Flu, the 'Flu strain is in it's un-mutated form which cannot in any case be transmitted to humans.

SANOVO EGG GROUP hereby confirms that we, to the best of our knowledge, have not received any eggs/products from affected farms, and our products do not contain any Avian Influenza virus. All products produced by SANOVO EGG GROUP are pasteurized according to the current EU legislation.
